IDENTITY TO IMPACT · CONCEPT PACK

Wonderfully made

You were designed with more care than any engineer can copy.

3 activities · Works without internet · Print any section with your browser's Print option

Rediscover

Usually about 90 minutes. Adjust to your group.

Overview

LEARNING GOALS

Identity goal
Young people can say that God made them with care, and name one way that changes how they treat themselves or others.

STEM goal
Young people can explain how engineers copy ideas from the human body, and why that is hard to do.

Big idea (2 minutes)
"How we see ourselves shapes how we build and how we live. Today we'll study one of the best-designed things in this room: you."

ACTIVITY CHOICES

- **Robotic hand**: best for groups that enjoy building.
- **Pinhole eye**: best for sunny days and quick builds.
- **Fingerprint detectives**: best for very low-cost settings and short time.

Identity: Scripture and reflection

Bible passage: Psalm 139:13–14

What it means
David praises God for making him with care, even before he was born. Every person is made on purpose and fully known by God.

What it doesn't mean
It isn't about looks or skills, and no body is better than another. It praises God; it isn't about being proud of ourselves.

Unlearn
What have you believed about your body, your looks, or your abilities that isn't true?

Rediscover
What did today's activity show you about how carefully you were made?

Live it out
How will you treat yourself, and others, differently this week, knowing each person was made this carefully?

Reflection format idea: Draw it. Young people trace their hand and write or draw one true thing God says about them inside it.

Facilitator note

Every body is wonderfully made, including bodies with disabilities or limb differences. Never suggest a difference is a design flaw. If a young person has a hand, eye, or limb difference, talk with them privately before the session. Ask how they'd like it to go.

Activities

Robotic hand

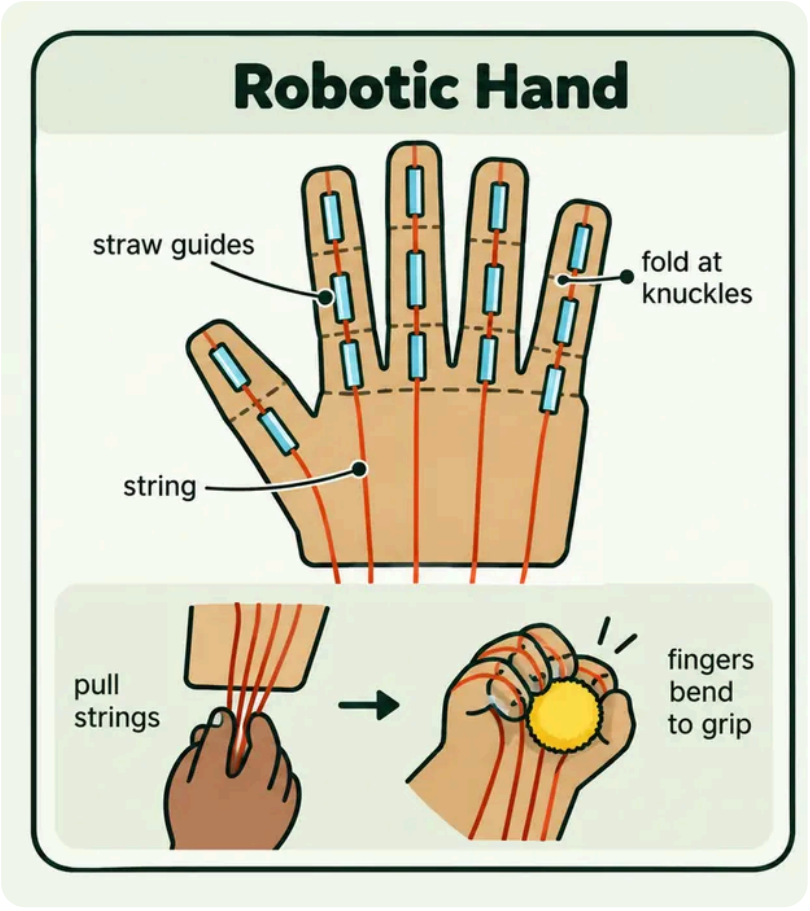

Best for: groups that enjoy building.

About 45 min of activity · prep about 10 min · low cost · indoor

No reading needed | Medium energy | Low cost | Indoor

Science | **Engineering**

Why this activity: Young people study their own tendons, then discover how hard it is to copy even one finger.

What the finished hand looks like.

STEM: Science: how tendons pull fingers to bend them; **Engineering:** designing a finger that bends and grips.

Prep (estimate): About 10 minutes. Gather materials and try one finger yourself.

Materials per team

A piece of thin cardboard (a cereal box works), 5 plastic drinking straws, about 1 m of string or yarn, tape, scissors to share, and small things to pick up, like bottle caps or paper balls.

Can't find it? *What matters:* the card must fold cleanly and spring back a little, the guides must keep each string close to the finger, and the string must slide easily. Rolled paper tubes taped flat can replace straw pieces. Yarn, thread, or fishing line can replace string. Any thin card, such as a cereal box or folder, works. These swaps are our suggestions and haven't been tested, so try one first.

Steps

1. Everyone wiggles their fingers and watches the tendons (the cords that pull the fingers) move on the back of the hand.
2. Trace around one person's hand and wrist on the cardboard, then cut it out.
3. Draw a line across each finger where the knuckles bend: three lines on each finger, two on the thumb. Fold the cardboard back and forth along each line so it bends easily.
4. Cut the straws into short pieces, about 2 cm long. Tape one piece flat on each finger section between the fold lines. Don't cover the folds, or the finger won't bend.
5. Each team member takes one finger. Thread a piece of string from the fingertip down through that finger's straw pieces and out past the wrist. Tape the string firmly to the fingertip.
6. Predict which finger will be hardest to control. Then hold the wrist flat and pull one string at a time; the finger should curl.
7. Test: pick up three objects using only the robotic hand. Then redesign straw spacing, fold positions, or string length, and test again.

> **If it doesn't work:** If a finger won't bend, check that no straw piece crosses a fold. If it bends the wrong way, fold the cardboard the other way so it curls toward the palm.

Ask while they work: Which finger is hardest to control? What happens if you move a straw piece closer to a fold? How is your hand different from the model?

Safety and prep: Adults cut thick cardboard. Cut strips and straw pieces before the session; this build can take a long time.

Science, inclusion, and extensions

Bridge to reflection: After the build: "Your team worked hard to copy one hand, and it still can't do what yours can. God made all of you."

Make it harder (optional): Add a thumb that can move separately, then try to pick up three objects of different sizes and weights. Which object is hardest, and why?

Include everyone: A young person with limited hand use can be Director, guiding where to fold and thread. Blind young people can follow the string and feel the finger curl.

Source: adapted from Science Buddies, "Build a Robot Hand." Prep times, swaps, calculator amounts, and any changes to the steps are our own and haven't been tested yet.

Pinhole eye

Best for: sunny days and quick builds.

About 30 min of activity · prep about 10 min · free · indoor or outdoor

No reading needed | Low energy | Free | Indoor or outdoor

Science | **Technology**

Why this activity: Young people build a simple model of one part of the eye: light passing through a small opening makes an upside-down picture on a screen.

Two sliding tubes: foil and pinhole on the larger tube, the screen on the smaller one.

STEM: Science: light travels in straight lines, so the picture is upside down; **Technology:** building a simple camera, the idea behind real cameras.

Prep (estimate): About 10 minutes. Cut card to size and test one viewer yourself near a bright window.

Materials per team

Two sheets of black A4 card, a ruler, a pencil, double-sided tape (or glue stick) and clear tape, a square of aluminium foil about 10 cm wide, a square of tracing paper about 10 cm wide, and one pin. Optional: a dark cloth or jacket.

Can't find it? *What matters:* the tube walls must block light, the foil must be thin enough for a tiny clean hole, and the screen must let light through so you can see the picture. Dark, thick paper can

replace black card if no light shows through it. Baking paper or a thin white plastic bag can replace tracing paper. These swaps are our suggestions and haven't been tested, so try one viewer first.

Steps

1. On the first card, draw a line 85 mm from one short edge. On the second card, draw a line 70 mm from one short edge. Put double-sided tape along each line.
2. Roll each card into a tube, from the edge without tape, until the other edge reaches the tape line. Press the edges together. You now have one larger tube and one smaller tube. The smaller tube should slide inside the larger one: snug, but able to move.
3. Stretch the tracing paper tightly over one end of the smaller tube. Tape it around the sides. This is the screen.
4. Stretch the foil flat over one end of the larger tube. Tape it around the sides.
5. Pin safety: hold the tube on a table and push the pin in gently, pointing away from your other hand. Make one tiny hole in the centre of the foil. Return the pin to the facilitator.
6. Push the smaller tube into the open end of the larger tube, screen end first. The screen is now inside, facing the pinhole.
7. Guess what the picture on the screen will look like.
8. Point the foil end at something brightly lit, such as a sunny window or a tree outside. Never point it at the sun. Look into the open end of the smaller tube at the screen. Cup your hands around your eye, or put a cloth over your head, to block other light.
9. Slide the smaller tube in and out. This changes the distance between the pinhole and the screen. It does not focus a lens; there is no lens.
10. Investigate: keep the same object and the same pinhole. Try a short and a long distance. Measure the distance from the foil to the screen with a ruler. Compare image size, brightness, and sharpness. Look twice at each distance.

> **If it doesn't work:** If you see nothing, block more light and point at something brighter. If the picture is very blurry, the hole may be too big; put on fresh foil and make a smaller hole. If the tubes won't slide, re-roll the smaller tube a little tighter.

Ask while they work: What changes when you slide the tube out? What stays the same? Why might the picture be upside down?

Safety: Never point the viewer at the sun or look at the sun. Only the facilitator hands out pins, and collects them after use.

Science, inclusion, and extensions

> **Bridge to reflection:** Your viewer made a dim, upside-down picture. Your real eye does far more: it adjusts to light and works with your brain all the time without you thinking about it.

The science: Light travels in straight lines. Light from the top of an object passes through the pinhole and lands low on the screen, and light from the bottom lands high, so the picture is upside down. A larger distance makes a larger but dimmer picture. Your eye also forms an upside-down

image on the retina, the light-sensitive layer at the back. Your brain processes the signals so you see the world the right way. This viewer models only some parts of the eye: it has no lens, and it cannot adjust itself.

> **Make it harder (optional):** Measure the picture's height at three distances, keeping the same object and pinhole. Record the distance from the foil to the screen each time. Use your results to describe how picture size changes with distance, and explain why.

Include everyone: This activity relies on sight to see the picture. Young people who are blind or have low vision can measure and roll the tubes, keep the record, and ask others to describe the picture. If several participants can't see the result, choose the robotic hand or fingerprint activity instead.

Source: adapted from Photoworks, "Make a Pinhole Camera" (resource by Elizabeth Doak). Prep times, swaps, calculator amounts, and any changes to the steps are our own and haven't been tested yet.

Fingerprint detectives

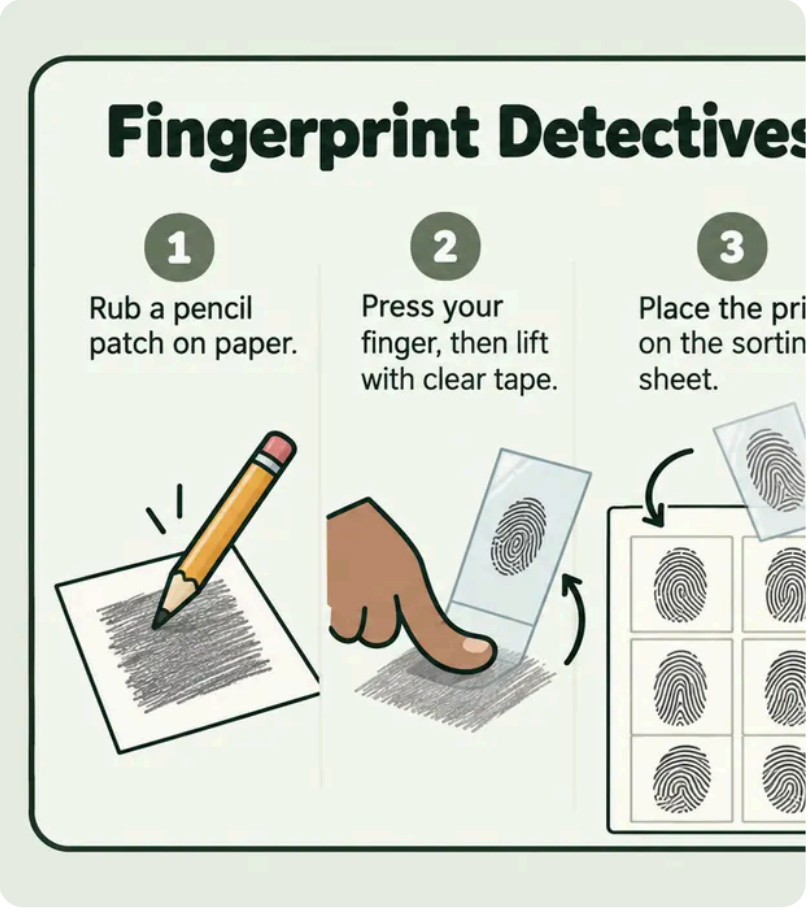

Best for: very low-cost settings and short time.

About 30 min of activity · prep about 5 min · free · indoor

Some reading | Low energy | Free | Indoor

Science | **Math**

Why this activity: Young people discover that no two people share the same fingerprints, so each person is made individually.

Making and sorting prints.

STEM: Science: observing and classifying patterns; **Math:** counting ridges and tallying the group's patterns.

Prep (estimate): About 5 minutes. Gather pencils, tape, and paper, and try one print yourself.

Materials per team

A soft pencil (2B is best) or charcoal, clear sticky tape, white paper, and a magnifying glass if you have one.

Can't find it? *What matters:* a dark, powdery patch that sticks to skin, and tape clear enough to see the print through. Charcoal or a soft crayon can replace a soft pencil. Any clear sticky tape works. These swaps are our suggestions and haven't been tested, so try one first.

Loop Whorl Arch

Steps

1. Rub the pencil or charcoal thickly on paper to make a dark patch about the size of a coin, until it looks shiny.
2. Press a fingertip into the patch and roll it gently from side to side.
3. Press the sticky side of a piece of clear tape onto the fingertip, peel it off, and stick it onto white paper. Number each print instead of writing names.
4. Sort the prints into the three main patterns: loops (lines curve in and back out the same side), whorls (circles or spirals), and arches (lines rise in the middle and leave on the other side). Use the pattern drawing above. Predict which pattern is most common in the group.
5. Challenge: the facilitator makes a "mystery print" from a volunteer who agrees. Teams compare details to find the match.
6. Tally the patterns for the whole group and compare the result with your prediction.

> **If it doesn't work:** If prints are smudged, use less pencil and press the tape on firmly in one go.

Ask while they work: How did you decide which pattern this is? Do two prints from the same person always look identical? What detail helped you find the mystery print?

Privacy: Fingerprints are personal data. Let young people take their prints home or destroy them at the end; don't keep them.

Science, inclusion, and extensions

Bridge to reflection: No one else in the world has your prints. You are made, and known, individually.

Make it harder (optional): Look closer than the three main patterns. Count the ridges between two points on a print and use the count to match a mystery print.

Include everyone: Blind young people can feel the ridges of their own fingertips and compare textures.

Source: adapted from the University of Washington DO-IT program, "Classifying Fingerprints," and NSTA's Science and Children. Prep times, swaps, calculator amounts, and any changes to the steps are our own and haven't been tested yet.

Have a phone? Try this: Photograph a print and zoom in to count ridges or spot details a magnifying glass would show.

Session plan

A worked plan for about 90 minutes, using **Robotic hand**. Times are estimates. Adapt them to your group.

Purpose

- **STEM learning:** how tendons move fingers, and how engineers copy the body.
- **Identity focus:** each person was made with care, so how we treat our bodies and others matters.

Scripture: Psalm 139:13–14

David is praying, not writing a science lesson. He thanks God for knowing him completely, even before birth. The psalm is about being known and valued by God, not about having a perfect body.

Before the session

- Collect cardboard, straws, string, tape, scissors, and small objects for each team. Use the calculator for amounts.
- Build one finger yourself so you can show the folds and threading.
- Read the Bible passage notes and the facilitator note about bodies and disability.

Time: preparation about 15 minutes (before participants arrive); session about 90 minutes.

The session

1 Connect

about 10 min

You: Welcome everyone and play a short game such as "Name and motion."

Participants: Join in and learn names.

Move on with: "Look at your hand. Today we will try to copy it."

2 Introduce

about 10 min

You: Ask everyone to wiggle their fingers and watch the tendons. Explain the challenge: build a hand that can pick things up. Show how one finger folds and how the string pulls it.

Participants: Predict which part will be hardest to control.

Move on with: "Each team has a role for every person. Start with tracing your hand."

3 Explore

about 40 min

You: Walk around. Ask: "Which finger is hardest to control? What happens if you move a straw piece?"

Participants: Trace, cut, fold, thread, and test picking up three objects.

Move on with: "Now change one thing and see if it works better."

---

4 Improve and share

about 10 min

You: Ask each team to change one thing and test again.

Participants: Share which change helped most.

Move on with: "Engineers worked hard and still couldn't copy a real hand. Let's think about why."

---

5 Reflect

about 15 min

You: Read Psalm 139:13–14 aloud. Use the three questions below. Pairs talk first.

Participants: Talk in pairs, then share if they want to.

---

6 Live it out and close

about 5–10 min

You: Invite each person to name one action. Ask for quick feedback (thumbs up, middle, or down). Clean up together.

Participants: Tell a partner their action.

Reflect: questions from the experience

- What was hardest to copy? What does that show about your real hand?
- Unlearn: what have you believed about your body or abilities that isn't true?
- Rediscover: what does this passage say about how you were made?

Live it out (optional action)

This week, do one thing that treats your body, or someone else, as made with care, such as resting, encouraging someone, or refusing to mock someone's looks.

Close, feedback, and cleanup

Ask: "What is one thing you learned today?" Collect materials, return scissors, and check the room. Close with a short prayer or blessing if appropriate for your group.

Using the other activities in this theme

- **Pinhole eye:** About 30 minutes for exploring. Needs bright light, so check the room or plan to work near windows. Reflection: compare the simple viewer with how much the real eye does.

- **Fingerprint detectives:** About 30 minutes. Quieter and good for small spaces. Reflection: no two people have the same prints; each person is known individually.

Running the session

Before each session

- Try the activity yourself. Cut or prepare anything that slows building.
- Put materials into one set per team.
- Read the Bible passage and notes, and answer the three questions yourself first.
- Check who your safeguarding lead is.
- Make sure consent and health forms are in for every young person.

The session flow

Every session follows the same six steps. The times are estimates for a 90-minute session. Your group sets the pace, so adjust as you go.

1 Connect — about 10 min

Welcome everyone. Play a warm-up game. In the first session, agree group agreements. In later sessions, ask how last week's Live it out step went.

2 Introduce — about 10 min

Share a real-world problem and the big idea. Show the key steps and the safety rules. Teams predict what will happen.

3 Explore — 25–45 min, depending on the activity

Teams build or investigate. Walk around and ask questions while they work.

4 Improve and share — 10–20 min

Teams change one thing, test again, and tell the group what they found.

5 Reflect — about 15 min (at least 10)

Use the Bible passage and the three reflection questions. Talk in pairs first, then as a group. Connect reflection to what actually happened.

6 Live it out and close — 5–10 min

Each person names one small action for the week. Ask for quick feedback. Clean up together and close.

How the flow supports the learning journey

I2I's learning journey is **Unlearn** → **Rediscover** → **Live it out** → **Impact**. The session flow is how you walk that journey in one meeting. Connect and Introduce raise the questions. Explore and Improve give a shared experience to think about. Reflect moves through Unlearn and Rediscover. Live it out and close turns reflection into one action, and repeated actions lead to Impact over time.

When things don't go to plan

- **People arrive late:** start Connect with whoever is there. Give late arrivals a role in an existing team rather than repeating instructions for everyone.
- **Instructions aren't clear:** stop the group, demonstrate the step again with real materials, and ask one participant to explain it back.
- **Materials are limited:** use bigger teams, give each person a clear role, or prepare some parts beforehand.
- **A build fails, or results differ from predictions:** treat it as data. Ask, "What happened? Why? What will you change?" Don't fix it for them.
- **A team finishes early:** offer the activity's "Make it harder" idea, or ask them to help test another team's design.
- **Building or discussion takes longer:** shorten Improve and share to one quick change and one retest. Keep at least 10 minutes for Reflect and 5 for closing.
- **A project needs more time:** pause at a clear point, store the work safely, and continue next session, starting with a short reminder of what each team was doing.

Always protect: safety, every participant having a real role, a short reflection, and the closing. Everything else can be shortened.

Friendly competition (optional)

Some activities, such as the catapult target round or the balloon car distance test, can include a friendly challenge. Use clear criteria, the same materials and practice time for every team, and keep everyone taking part. No one is eliminated. Recognise improvement, careful testing, and teamwork as well as results. Never score faith, personal sharing, or spiritual growth. The community showcase is never a competition.

The session steps are adapted from the UNICEF Adolescent Kit guide "Eight session steps," which recommends a routine set of steps adapted to each group. UNICEF does not endorse this toolkit.

Starting well

Young people answer honestly only when they feel safe. Build trust before asking personal questions. Start with a game that needs everyone; the Warm-ups page has ideas.

Group agreements

Agree on these in the first session, in the young person's own words if possible. Remind the group each time.

- **You can always pass.** No one has to answer.
- **What others share stays here.** Don't repeat someone's story outside the group.
- **Listen without laughing or fixing.**
- **Speak for yourself.** Share your own story, not someone else's.

Be honest about one limit. Say it at the start: "If someone tells us they are being hurt or are unsafe, we will tell someone who can help." Then no one is surprised later.

Team roles

Give each person a role, and switch roles each session so everyone gets to lead.

Role	What they do
Director	Leads the design and guides builders with words or gestures. A strong role for a young person who can't easily handle materials.
Builder	Handles materials and puts the design together (everyone helps).
Tester	Runs each test fairly and counts or measures the result.
Recorder	Remembers, draws, or writes down predictions and results.
Presenter	Shares the team's design and learning.

Talking about failure

How you respond when a design breaks teaches more than any lesson.

Instead of	Try
"That didn't work."	"What did that test teach you?"
"Here, do it like this."	"Where did it break first? Why there?"

"Good job, you won."	"What change made the biggest difference?"

Leading reflection

Every session ends with the same three questions, in this order.

> **Unlearn**
> What did you believe about yourself while you built? Where did that thought come from?

> **Rediscover**
> What does God say is true about you?

> **Live it out**
> What will you do differently this week? Name one choice, relationship, or habit.

The last answer matters most. "I am wonderfully made" is a good start. "This week I'll share my idea in class instead of staying quiet" is the goal.

Each concept suggests a different way for young people to answer, such as drawing or a pair walk, so reflection stays fresh.

Following up

- **Tell a partner.** Each young person tells a partner their Live it out plan.
- **Check in next time.** If the group meets again, start with: "How did your Live it out go?"
- **Hand it to the church.** After a single session, ask young people if the youth leader can hear their plan. The leader follows up within a week.
- **Grace, not shame.** If someone didn't do it, that's not failure. Ask what got in the way, then try again, the way a team redesigns after a test.

Include everyone in the room

Need	What helps
Limited movement or hand use	A space everyone can reach. Work at a comfortable height. Bigger materials. Offer the Director role.

Need	What helps
Low vision or blind	Let them hold materials and a finished example first. Use tests they can hear or feel. Describe results out loud.
Deaf or hard of hearing	Get their attention, then face them. Don't stand with bright light behind you. Show, then tell. Agree on hand signals. Repeat what others say. Learn a few key signs in your national sign language.
Learning differences	One step at a time. Draw the six steps and point to where you are. Short build rounds. The same routine each time.
Reading difficulties, worry, or shyness	Never make anyone read aloud. Let them draw instead of write. Offer roles that don't need presenting. Tell them before it's their turn.

If a young person tells you about abuse or harm

1. Stay calm. Listen carefully. Don't show shock or doubt.
2. Let them speak at their own pace, in their own words. Don't ask leading questions or investigate.
3. Tell them they were right to tell you, and that it is not their fault.
4. Don't promise to keep it secret. Explain kindly that you need to tell someone who can help keep them safe.
5. Write down what they said, in their words, with the date and time.
6. Tell your church's safeguarding lead the same day, and follow your church's policy. Don't confront the person they named.

Safety basics

- Adults use knives and cut bottles or thick cardboard. Young people share scissors carefully.
- Check the space for hazards before young people arrive.
- Ask young people and families privately about health needs, such as seizures, allergies, or medicine. Keep this private.
- Have clean drinking water and a basic first-aid kit nearby.

Warm-ups

Short games to build trust at the start, wake people up in the middle, or calm the group after a serious talk. Use them whenever the group needs to connect.

Human Knot

10 min, high energy, start of a session

Stand in a circle. Everyone reaches across and takes two different people's hands, then the group untangles itself without letting go.

Include everyone: If anyone can't take part physically, play Group Story instead.

Name and motion

5 min, medium energy, first session

Each person says their name with a motion. The whole group repeats both. Go around the circle.

Include everyone: A motion can be anything: a nod, a blink, a wave.

Stand up if...

5 min, low to medium energy, start of a session

Read statements such as "Stand up if you've ever fixed something that was broken" or "... if you speak more than one language." Young people discover what they share.

Include everyone: Raising a hand works as well as standing.

Human machine

5 min, medium energy, before a build

One person starts a repeating motion and sound. Others join one at a time, each connecting to someone already moving, until the group becomes one machine.

Why it helps: Every part matters to the whole machine.

Count to 20

5 min, low energy, calming

The group counts aloud, one person at a time, in no set order. If two people speak at once, start again from 1.

Include everyone: For deaf young people, play by raising fingers instead of speaking.

Back-to-back drawing

10 min, low energy, middle of a session

Pairs sit back to back. One describes a simple shape without naming it; the other draws it. Compare, then swap.

Why it helps: Clear communication is a skill engineers depend on.

Three-minute tower

5 min, high energy, before a build

Same and different

5 min, low energy, first session

Teams get 10 sheets of paper and no tape. Build the tallest standing tower in three minutes.

Why it helps: A fast first try, and a reminder that first tries are meant to be improved.

Pairs find three things they have in common and one way they're different.

Mirror

5 min, low energy, after a heavy reflection

Pairs face each other. One moves slowly; the other mirrors. Swap leaders when the facilitator says so.

Strength web

10 min, low energy, closing

Stand in a circle. Holding the end of a ball of string, name a strength you saw in someone, then pass the ball to them. Keep going until everyone is part of the web.

Why it helps: Each person is seen and connected.

Group story

5 min, low energy, any time

The group tells one story, each person adding a single sentence. Everyone can take part from where they sit.

Forms and reflection resources

Consent and health forms are required for every young person. Each form has its own Print button.

Reflection resources for your program Optional

Young people don't need a worksheet every session. Choose a rhythm that fits your group; talking or drawing is welcome too.

One-day workshop

- **Closing conversation:** Ask one or two reflection questions aloud; a written sheet is not expected.

Weekend program

- **First session:** Invite participants to notice strengths, challenges, and how they approach learning. Form: Identity Check.
- **Later session:** Choose one small way to put a lesson into practice. Form: Live It Out.
- **Final session:** Look back on learning and growth together. Form: Final Reflection.

Week-long program

- **Beginning:** Use an Identity Check as a starting point; writing is optional. Form: Identity Check.
- **Middle:** Pick a practical Live It Out action and discuss progress later. Form: Live It Out.
- **Final day:** Close with a brief written, drawn, or spoken reflection. Form: Final Reflection.

Longer series (such as six sessions)

- **Early sessions:** Invite an initial Identity Check. Form: Identity Check.
- **Midway:** Revisit learning with a Live It Out action. Form: Live It Out.
- **Last session:** Use Final Reflection to look back and choose a next step. Form: Final Reflection.

These are suggested moments, not assignments or a measure of spiritual growth. Use only the forms that help your participants.

Looking for a starting activity? Explore warm-up ideas. Need the full forms? Browse all forms.

Participation and consent template

Check your requirements

Purpose	Records agreement to take part and photo choices.
Who uses it	Families, or older participants themselves.
When	Before the first session.
Is it needed?	Follow your church's policy and local law. If your church already has a consent form, use it instead.
Who keeps it	The organiser, stored securely.
Printing	Yes, one per participant, unless you use an existing form.

Identity to Impact is a hands-on STEM programme run by _____ (church or organisation). Participants build, test, and improve designs in teams, and reflect on what the Bible says about who they are. At least two trusted adults supervise every session.

Participant's name _____ Age _____

Parent or guardian (if under 18) _____ Phone _____

☐ I agree to take part (or for the participant to take part) in Identity to Impact sessions.

☐ Photos or videos may be taken for programme use.
☐ These photos or videos may be shared publicly (for example, on church social media).
☐ No photos or videos, please.

Signature _____ Date _____

Signed by a parent or guardian for participants under 18 (or under the age your local rules set). Participants aged 18–19 can sign for themselves.

Health and emergency information

Check your requirements

Purpose	Gives adults the health and emergency details they may need.
Who uses it	Families, or older participants themselves.
When	Before the first session.
Is it needed?	Strongly recommended. Use your church's existing record if it has one.
Who keeps it	The lead facilitator, kept private and shared only with adults who need it.
Printing	Yes, unless you use an existing record.

Young person's name _____

Emergency contact _____ Phone _____

Second contact _____ Phone _____

Allergies (including latex or food) _____

Medical conditions (e.g. seizures, asthma) _____

Medication and what to do in an emergency _____

Anything that helps this young person take part fully _____

Parent or guardian signature _____ Date _____

Attendance sheet

Recommended

Purpose Shows who came and who had the chance to take part.
Who uses it The facilitator.
When Every session.
Is it needed? Recommended. Your church may already keep attendance; use that if so.
Who keeps it The organiser.
Printing Optional. A notebook works.

Church or site _____ Facilitator _____

Our group agreements Optional

Purpose	Reminds everyone of the agreements the group made.
Who uses it	The whole group.
When	The first session, then displayed each time.
Is it needed?	Optional.
Who keeps it	The group.
Printing	Optional; it can be written on a board.

1. You can always pass.
2. What others share stays here.
3. Listen without laughing or fixing.
4. Speak for yourself.

If someone tells us they are being hurt or are unsafe, the adults will tell someone who can help.

Session reflection Optional

Purpose	Lets participants say what they did and noticed, without scores.
Who uses it	Participants.
When	At the end of a session, if helpful.
Is it needed?	Optional. Participants can skip any question or the whole sheet.
Who keeps it	Participants keep it, or the facilitator collects it only if participants agree.
Printing	Optional.

No name needed. Skip any question. You can write, draw, or tell a facilitator privately.

I used what happened in a test to change something.	☐	☐	☐	☐
I shared an idea or helped someone in my team.	☐	☐	☐	☐
I felt included in my team.	☐	☐	☐	☐

Asking for help or getting help is a good thing. It does not mean you did less well.

One thing I learned or noticed today (words or a drawing):

Anything you want the facilitator to know (optional):

Identity check Optional

Purpose	Lets participants notice how their own views change across a series.
Who uses it	Participants.
When	Only at the start and end of a series, not every session.
Is it needed?	Optional, and only for a series.
Who keeps it	If collected, the organiser stores it securely. Use a participant code, not a name, and agree who can see it.
Printing	Optional.

There are no right or preferred answers. Your answers show how you see things now. They are not a score of faith and do not prove change.

Participant code (only if your organisation matches start and end answers) _____

☐ Start of series ☐ End of series

Statement	Not true	A little	Mostly	Very true	Not sure
I can name a voice that has shaped how I see myself.	☐	☐	☐	☐	☐
I can say something God says about who I am.	☐	☐	☐	☐	☐
I have done something differently because of what I believe.	☐	☐	☐	☐	☐
I believe my small actions can make a difference.	☐	☐	☐	☐	☐

Live it out follow-up notes Optional

Purpose	Helps you remember what participants chose to share, so you can ask kindly next time.
Who uses it	The facilitator.
When	At the next session.
Is it needed?	Optional.
Who keeps it	The facilitator, kept private.
Printing	Optional; a notebook works.

For the facilitator's memory only. Write an action down only if the participant agrees. Private actions do not go here. Not trying, forgetting, or finding it hard are all fine.

First name or code (with permission)	Action they chose to share	What they shared later (if anything)	Difficulties	Possible next step

Final reflection Optional

Purpose	Collects examples, questions, and feedback about the programme.
Who uses it	Participants.
When	At the end of a series.
Is it needed?	Optional.
Who keeps it	The organiser, if participants hand it in.
Printing	Optional; it can be a group discussion.

No name needed. Answer any questions you like, in writing, by drawing, in pairs, or to a facilitator.

1. Which session or activity was most useful or enjoyable, and why?

2. Was there a time something from a session came up in your life? (optional)

3. What questions do you still have?

4. Did you feel included? What would have helped?

5. What should we keep, and what should we change?

Incident or accident report

Follow your procedures

Purpose	Records an injury, accident, or near miss.
Who uses it	The facilitator.
When	The same day as any incident.
Is it needed?	Use your church's procedure; this template supports it.
Who keeps it	The programme lead or safeguarding lead.
Printing	Yes, if your church has no form of its own.

Date and time _____ Location _____

Person involved _____ Reported by _____

What happened?

_____

_____

Injuries and first aid given

_____

Parent or guardian informed? ☐ Yes ☐ No. By whom and when:

_____

What will we change to prevent this happening again?

_____

Disclosure record

Follow your procedures

Purpose	Records exactly what a young person said if they share that they are being harmed.
Who uses it	The adult they told.
When	As soon as possible after a disclosure.
Is it needed?	Always follow your church's safeguarding policy. Use this only if it has no form of its own.
Who keeps it	The safeguarding lead only.
Printing	Yes, if needed.

Date and time of disclosure _____ Place _____

Young person's name _____ Age _____

Adult who received the disclosure _____

What the young person said, in their own words:

_____

_____

_____

How they appeared, and anything you observed:

_____

What you said or did in response:

_____

Passed to safeguarding lead (name, date, time) _____

Signature _____
